Wetland Screening and Delineation, Fayette County, Pennsylvania

RedHorse Environmental worked with its project partner McMillen Engineering to implement the design for a PGA championship class golf course on approximately 100 acres in southwest Pennsylvania. The new 9 hole golf course will be located on a parcel of land that included rolling hills, several small high-quality streams, and scattered wetlands. RedHorse Senior staff conducted a GIS screening of the project site and a comprehensive field assessment that identified and delineated all wetlands (~ 18 acres) and stream resources. The assessment findings were utilized to ultimately reduce wetland and stream impacts to less than 1,000 square feet.
